“Enhance the natural beauty of entry ways to your home and business.”

TARGET MARKET:

- Home owners and Renters
- Business owners

FEATURES:

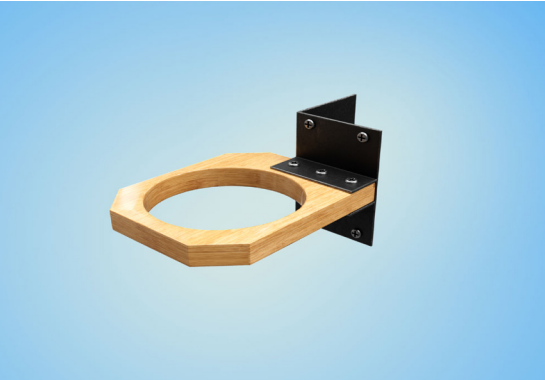

- Column bracket
- Planter plank
- Enclosure mounting bracket

PATENT INFORMATION:

Patent pending.

SUMMARY:

Patio Perch is an elevated planter designed to provide the consumer with a way to get their potted plants off the ground or bulky shelving, freeing up space and adding a more visually appealing arrangement of their floral decor. With the simple open slot design, you won't have to worry about the wind blowing your pots over or your pets making a mess when they are outside on the patio. The Patio Perch can enhance the natural beauty of entryways to your home or business by allowing you to put your colorful or aromatic plants up columns or wall corners. It is also great for fence posts, patio beams, mailbox posts, wall corners, pool enclosures, etc. Anywhere there is a corner, there can be a patio perch.

The Patio Perch cat pad is designed the same way with a different type of perch platform. It is simply a flat panel for your cat to lounge on and get off the ground and up in the sun, right where they want to be. They can be placed in any direction you choose and as many as you choose, allowing your furry friend to leap from one perch to the next.

All the Patio Perch designs can be installed in any direction, putting your perch on any side of the column you choose. Multiple planters can be placed on a single column, wrapping the column with your plants. The placement possibilities of the product are incredibly universal, making the number of applications extremely vast.

About the Developer

Thomas Rooks from Casselberry, FL, came up with the idea to beautify his property by bringing the landscape off the ground and putting it right into the view of everyone who visits. Thomas contacted the Mars Rising Network and had a provisional and design patent application filed and had the invention designed properly so that he may see success with this great idea and turn it into a real product. He is actively seeking a company that would have an interest in licensing the product for royalty. Working with Mars Rising Network, this essential new design concept was refined and prepared to be presented as a commercial product.
